

End-to-End Flow & Content Blueprint

How a working professional goes from an ad click to a job-ready, paid learner — designed to **motivate the purchase** at every step. Conversion: online (Razorpay) + mentor-assisted. Free preview: a **curated sampler**.

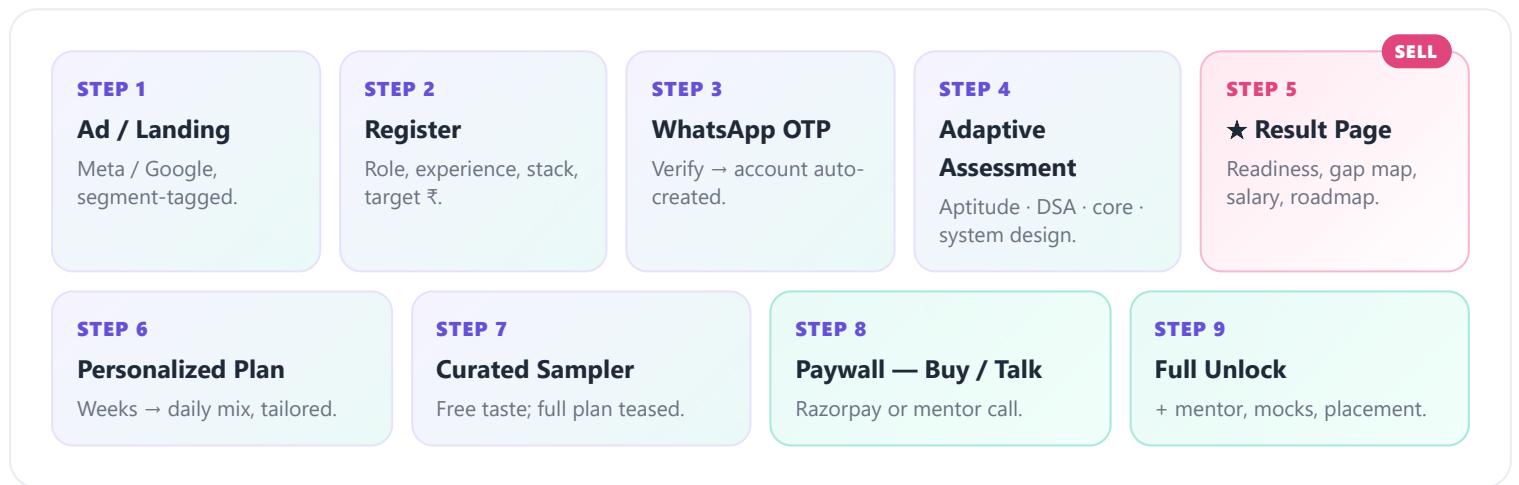

25 Jun 2026

Revenue segment: working professionals

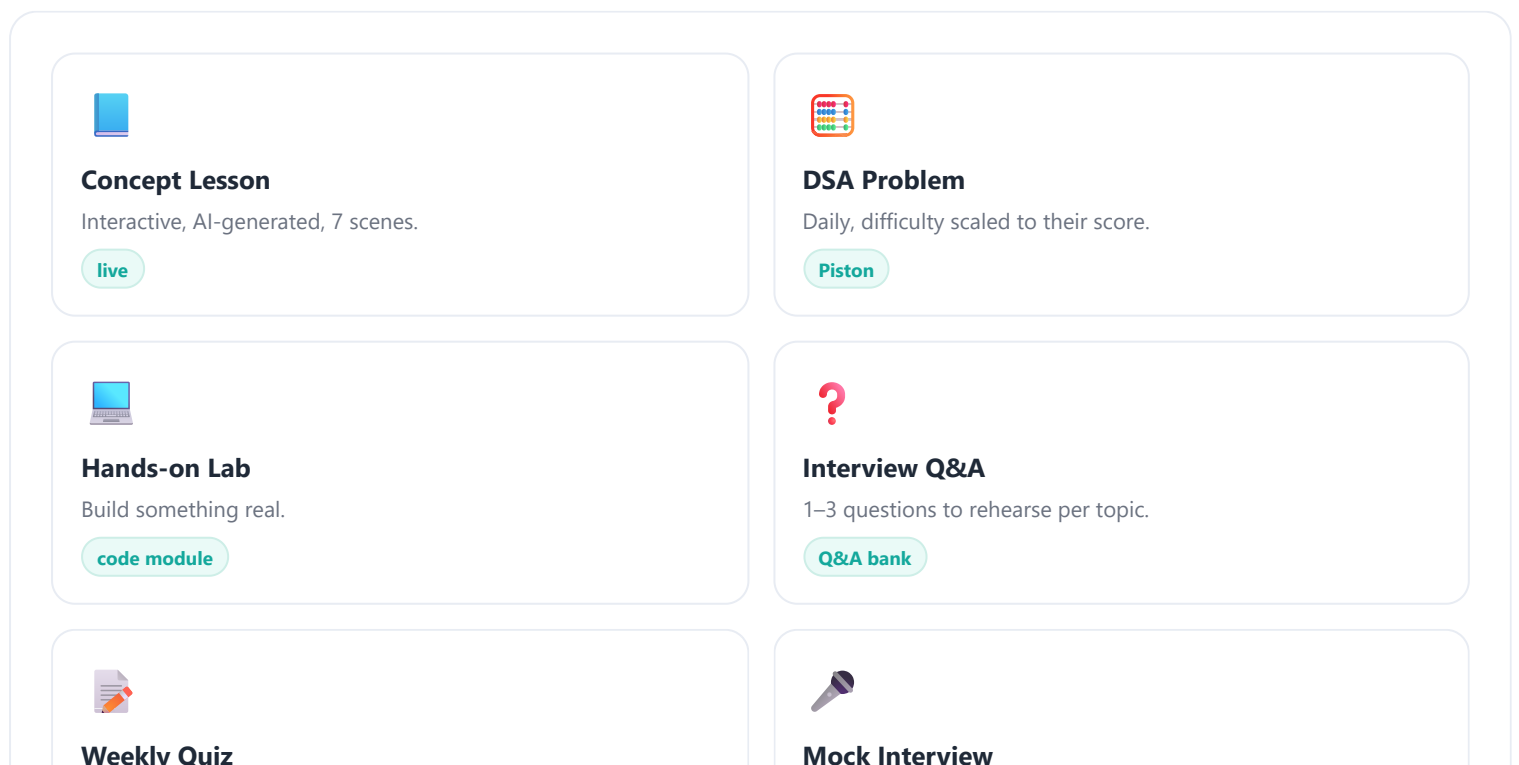

Buy now + Talk to mentor

Curated sampler preview

① The Journey — register → job-ready

② Content Plan — every day is a mix (not one lesson)

Checkpoint & reinforce.

quiz module

Milestones (wk 3/6/9) + AI feedback.

AI Interview

Project

Portfolio piece, mid & end.

assignment

Placement

Job-ready → real interviews.

placement

③ Milestone Timeline — personalized (example: 9-week pro track)

WK 1

Core foundations

WK 2

DSA + fundamentals

WK 3

Mock #1

WK 4

Backend

WK 5

Project #1

WK 6

Mock #2

WK 7

Frontend + sys design

WK 8

Capstone

WK 9

Mock #3 → Placement

Personalized by assessment: weak areas get more days/DSA; mastered areas compress; ≥90% drops. Seniors get system design + harder DSA; freshers get fundamentals-heavy.

④ The Curated Sampler — what sells the rest

🎁 Free (curated taste)

- ✓ 1 full interactive concept lesson (their day-1 topic)
- ✓ 1 DSA problem — solvable, runs on Piston
- ✓ 1 sample AI mock-interview question
- ✓ Their Readiness Score, gap map & salary potential

🔒 Visible but locked (the desire)

- 🔒 The entire personalized week-by-week plan (titles shown)
- 🔒 All mock interviews + AI feedback
- 🔒 Full DSA track, projects & labs
- 🔒 Mentor support, progress/history, certificate, placement

⑤ The Result Page — the #1 conversion surface

You're on track for ₹12-18 LPA ~~₹6 LPA now~~

Your personalized **9-week path to a Java Fullstack role**. We've mapped your gaps — Core Stack, Problem-Solving, DSA — into a day-by-day plan with mock interviews and a portfolio project.

Talk to a mentor

Buy now → instant full unlock (Razorpay). Talk to a mentor → routed to the CRM for a telecaller close.

24%

Job-readiness today

- + percentile vs peers
- + gap breakdown by skill
- + "ready by [date]" framing
- + social proof / outcomes

⑥ The pieces we're adding (reuse-first)

PIECE	WHAT IT IS	REUSES
DSA track	A daily DSA problem, difficulty from the candidate's DSA sub-score.	Piston / code module
Mock interviews	Milestone checkpoints (wk 3/6/9) with AI feedback + optional scheduled human mock.	AI Interview module (live)
Interview Q&A	Topic/role question bank surfaced daily to rehearse.	InterviewQuestion bank
Raise a concern	"Ask a doubt / raise concern" → ticket/notification to a mentor.	new (light) + CRM
My Journey + history	Week-by-week map, progress %, streak, XP, scores, completed history, what's next.	new view over existing data

⑦ Build sequence

- 1

Content-plan blueprint
Extend the master-track + personalization + day-generation to emit the full day-mix and weeks/milestones. The foundation everything renders from.
- 2

Result page (sell)
Readiness gauge, gap map, salary delta, roadmap preview, dual CTA (Buy now + Talk to mentor).
- 3

"My Journey" plan view
Rich week-by-week map, progress/streak/XP, history, locked-but-teased items. Replaces today's bare day view.

4

DSA + Interview Q&A + Mock interviews

Wire the daily/milestone items into the plan, reusing existing modules.

5

Raise a concern

Student doubt/concern → mentor ticket/notification.

6

Paywall + payment

Razorpay self-serve unlock + telecaller route, mirroring the Result-page CTAs.

Status today: Steps 1–6 of the journey are live (register → OTP → assessment → result → master-track personalization → AI lesson generation). This blueprint defines the upgrade: a richer day-mix, the conversion-first Result page, the "My Journey" view, the missing tracks (DSA / mock / Q&A / concerns), and the dual paywall. Built slice by slice, verified in production each time.

Codebegun LMS — Assessment → Job-Ready: End-to-End Flow & Content Blueprint · 25 Jun 2026.

Decisions locked: conversion = online (Razorpay) + mentor-assisted; free preview = curated sampler. Illustrative figures (salary, 9-week length) are placeholders, personalized per candidate at runtime.
